# The Code

```

//Accelerometer angle calculations
acc_total_vector = sqrt((acc_x*acc_x)+(acc_y*acc_y)+(acc_z*acc_z)); //Calculate the total accelerometer vector
//57.296 = 1 / (3.142 / 180) The Arduino asin function is in radians
angle_pitch_acc = asin((float)acc_y/acc_total_vector)* 57.296; //Calculate the pitch angle
angle_roll_acc = asin((float)acc_x/acc_total_vector)* -57.296; //Calculate the roll angle

//Place the MPU-6050 spirit level and note the values in the following two lines for calibration
angle_pitch_acc -= 0.0; //Accelerometer calibration value for pitch
angle_roll_acc -= 0.0; //Accelerometer calibration value for roll

if(set_gyro_angles){ //If the IMU is already started
    angle_pitch = angle_pitch * 0.9996 + angle_pitch_acc * 0.0004; //Correct the drift of the gyro pitch angle with
    angle_roll = angle_roll * 0.9996 + angle_roll_acc * 0.0004; //Correct the drift of the gyro roll angle with
}
else{ //At first start
    angle_pitch = angle_pitch_acc; //Set the gyro pitch angle equal to the accelerometer
    angle_roll = angle_roll_acc; //Set the gyro roll angle equal to the accelerometer
    set_gyro_angles = true; //Set the IMU started flag
}

```

```
void setup() {  
  myservo1.attach(5); // attaches the servo on pin 9 to the servo object  
  myservo2.attach(6); // attaches the servo on pin 9 to the servo object  
  myservo3.attach(9); // attaches the servo on pin 9 to the servo object  
  myservo4.attach(10); // attaches the servo on pin 9 to the servo object  
}  
  
void loop() {  
  for (pos = 0; pos <= 180; pos += 1) { // goes from 0 degrees to 180 degrees  
    // in steps of 1 degree  
    myservo1.write(pos2-pos);  
    myservo2.write(pos);  
    myservo3.write(pos2-pos);  
    myservo4.write(pos); // tell servo to go to position in variable 'pos'  
    delay(8); // waits 15 ms for the servo to reach the position  
  }  
  for (pos = 180; pos >= 0; pos -= 1) { // goes from 180 degrees to 0 degrees  
    myservo1.write(pos2-pos);  
    myservo2.write(pos);  
    myservo3.write(pos2-pos);  
    myservo4.write(pos); // tell servo to go to position in variable 'pos'
```

# Challenges Along the Way.

- Restrictions due to COVID-19
- Complex C++ coding was required

# The Solutions We Implemented.

- Looked for inspiration online for advanced codes
- Switched to online platforms for team meetings

# What We Learnt Along the Way

- Teamwork & Collaboration
- Problem Solving & Critical Thinking
- New Skills
- Innovative Ways of Tackling Challenges
